application:

Listing of Claims:

1-37. (Canceled)

38. (Withdrawn) A method for the production of a powder comprising essentially

spherical particles of an aromatic polyether ketone plastic, comprising: mixing a matrix

micropowder into a liquid phase to form a suspension wherein the particle size of the

matrix micropowder is less than the particle size of the powder; spraying the suspension

through a nozzle to form droplets comprising the matrix micropowder; and vaporizing or

evaporating a liquid component from the droplets to form the powder in the form of

essentially spherical agglomerates.

39. (Withdrawn) The method according to claim 38, wherein the liquid phase is further

mixed with at least one of a reinforcing fiber or a stiffening fiber having a length less

than the particle size of the powder.

40. (Withdrawn) The method according to claim 38, wherein the matrix micropowder

has an average grain size d_{50} between 3 and 10 μ m.

41. (Withdrawn) The method according to claim 38, wherein the matrix micropowder

has an average grain size d_{50} of 5 μ m.

42. (Withdrawn) The method of claim 39, wherein the fibers have an average length

L50 of 20 to 150 µm.

43. (Withdrawn) The method according to claim 39, wherein the fibers have an average

5

length L50 of 40 to 70 μm.

ONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

FACSIMILE (312) 913-0002

44. (Withdrawn) The method according to claim 39, wherein the matrix micropowder

has an average grain size d_{50} between 3 and 10 μ m and the fibers have an average length

L50 of 10 to 100 μm.

45. (Withdrawn) The method according to claim 39, wherein the matrix micropowder

has an average grain size d_{50} of 5 µm and the fibers have an average length L50 of 10 to

80 μm.

46. (Withdrawn) The method according to claim 38, wherein the droplets have an

average diameter d_{50} of 10 to 70 μm .

47. (Withdrawn) The method according to claim 38, wherein the vaporizing or

evaporating is carried out with the droplets are moving through a heating segment.

48. (Withdrawn) A method for the production of a powder comprising a first

component in the form of essentially spherical powder particle or least one of a stiffening

fiber or a reinforcing fiber wherein the first component comprises a matrix material, and

the fibers are powder particles, comprising mixing a matrix micropowder with a liquid

phase to form a suspension wherein the particle size of the matrix micropowder is less

than the particle size of the powder; spraying the suspension through a nozzle to form

droplets comprising the matrix micropowder; and vaporizing or evaporating a liquid

component from the droplets to form the powder in the for of essentially spherical

agglomerates,

49. (Withdrawn) The method according to claim 48, wherein the liquid phase is further

mixed with at least one of a reinforcing fiber or a stiffening fiber having a length less

than the particle size of the powder.

50. (Withdrawn) The method according to claim 48, wherein the matrix micropowder

has an average grain size d_{50} between 3 and 10 μ m.

ONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

51. (Withdrawn) The method according to claim 48, wherein the matrix micropowder

has an average grain size d_{50} of 5 μ m.

52. (Withdrawn) The method of claim 48, wherein the fibers have an average length

L50 of 20 to 150 μ m.

53. (Withdrawn) The method according to claim 48, wherein the fibers have an average

length L50 of 40 to 70 μ m.

54. (Withdrawn) The method according to claim 49, wherein the matrix micropowder

has an average grain size d_{50} between 3 and 10 μ m and the fibers have an average length

L50 of 10 to 100 μ m.

55. (Withdrawn) The method according to claim 49, wherein the matrix micropowder

has an average grain size d_{50} of 5 µm and the fibers have an average length L50 of 10 to

80 μm.

56. (Withdrawn) The method according to claim 48, wherein the droplets have an

average diameter d₅₀ of 10 to 70 μm.

57. (Withdrawn) The method according to claim 48 wherein the vaporizing or

evaporating is carried out while the droplets are moving through a heating segment.

58. (Withdrawn) A method for the production of a powder comprising essentially

spherical particles of an aromatic polyether ketone plastic, comprising: cooling a coarse

granulate comprising a plastic matrix material to form brittle, coarse granulates; grinding

the brittle, coarse granulates; and separating the ground granulate into a fraction

spectrum.

59. (Withdrawn) The method according to claim 58, wherein the coarse granulate is a

fiber-reinforced plastic matrix material.

OONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

60. (Withdrawn) The method according to claim 58, wherein the grinding is carried out

with a pinned disk mill.

61. (Withdrawn) The method according to claim 58, wherein the grinding is carried out

with cooling.

62. (Withdrawn) The method according to claim 58, wherein the separating is carried

out with an air separator.

63. (Withdrawn) The method according to claim 58, further comprising: smoothing the

ground granulate.

64. (Withdrawn) The method according to claim 63, wherein the smoothing is carried

out by embedding or accumulating at least one of microparticles or nanoparticles.

65. (Withdrawn) A method for producing a powder comprising a first component in the

form of essentially spherical powder particles and at least one of a stiffening fiber or a

reinforcing fiber, wherein the first component comprises a matrix material, comprising:

cooling a coarse granulate comprising a plastic matrix material to form brittle, coarse

granulates; grinding the brittle, coarse granulates; and separating the ground granulate

into a fraction spectrum.

66. (Withdrawn) The method according to claim 65, wherein the coarse granulate is a

fiber-reinforced plastic matrix material.

67. (Withdrawn) The method according to claim 65 wherein the grinding is carried out

with a pinned disk mill.

68. (Withdrawn) The method according to claim 65, wherein the grinding is carried out

with cooling.

OONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

FACSIMILE (312) 913-0002

69. (Withdrawn) The method according to claim 65, wherein he separating is carried

out with an air separator.

70. (Withdrawn) The method according to claim 65, further comprising smoothing the

ground granulate.

71. (Withdrawn) The method according to claim 70, wherein the smoothing is carried

out by embedding or accumulating at least one of microparticles or nanoparticles.

72. (Currently amended) A method for producing a powder comprising essentially

spherical powder particles of an aromatic polyether ketone plastic for use in the

production of three-dimensional structures or molded bodies by means of layered

manufacturing methods, the method comprising:

melting a matrix material;

blowing the melted matrix material through a nozzle to form droplets; and

passing the droplets through a cooling segment, wherein a medium grain size d₅₀

of the spherical powder particles lies in a range from about 20 micrometers (µm) to about

150 μm.

73. (Previously presented) The method according to claim 72, further comprising:

stirring at least one of stiffening fibers or reinforcing fibers into the melted matrix

material before blowing the melted matrix material.

74. (Previously presented) The method according to claim 72, wherein the droplets are

formed in a hot gas jet.

75. (Previously presented) The method according to claim 72, further comprising:

separating the cooled droplets into a fraction spectrum.

DONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

FACSIMILE (312) 913-0002

76. (Currently amended) A method for producing a powder comprising a first component in the form of essentially spherical powder particles and at least one of a stiffening fiber or a reinforcing fiber for use in the production of three-dimensional structures or molded bodies by means of layered manufacturing methods, wherein the

first eonnection component comprises a matrix material, the method comprising:

melting a matrix material;

blowing the melted matrix material through a nozzle to form droplets; and passing the droplets through a cooling segment, and wherein a medium length L50 of the fibers maximally corresponds to the value of the medium grain size d50 of the spherical powder particles.

- 77. (Previously presented) The method according to claim 76, further comprising: stirring at least of stiffening or reinforcing fibers into the melted matrix material before blowing the melted matrix material.
- 78. (Previously presented) The method according to claim 76, wherein the droplets are formed in a hot gas jet.
- 79. (Previously presented) The method according to claim 76, further comprising: separating the cooled droplets into a fraction spectrum.
- 80. (Withdrawn) A method for producing a spatial structure, comprising: melting the powder according to claim 38.
- 81. (Withdrawn) The method according to claim 80, wherein melting includes powder-based generative rapid prototyping, selective laser sintering of laser melting.
- 82. (Withdrawn) A method for producing a spatial structure, comprising: melting the powder according to claim 48.
- 83. (Withdrawn) The method according to claim 82, wherein melting includes powder-

based generative rapid promoting, selective laser sintering or laser melting.

84. (Withdrawn) A molded body obtained by powder-based generative rapid

prototyping of the powder according to claim 38.

85. (Withdrawn) The molded body of claim 84, wherein the powder-based generative

rapid prototyping is selective laser sintering or laser melting.

86. (Withdrawn) A molded body obtained by powder-based generative rapid

prototyping of the powder according to claim 38.

87. (Withdrawn) The molded body of claim 86, wherein the powder-based generative

rapid prototyping is selective laser sintering or laser melting.

88. (Withdrawn) The molded body according to claim 84, comprising one or more

interior reinforcements.

89. (Withdrawn) The molded body according to claim 84, comprising a three-

dimensional framework reinforcement.

90. (Withdrawn) The molded body according to claim 86, comprising one or more

interior reinforcements.

91. (Withdrawn) The molded body according to claim 86, comprising a three-

dimensional framework reinforcement.

92. (Withdrawn) A molded body obtained by powder-based generative rapid

prototyping of the powder according to claim 38.

93. (Withdrawn) The molded body of claim 92, wherein the powder-based generative

OONNELL BOEHNEN HULBERT & BERGHOFF LLP 300 SOUTH WACKER DRIVE CHICAGO, ILLINOIS 60606 TELEPHONE (312) 913-0001

rapid prototyping is selective laser sintering or laser melting.

94. (Withdrawn) The molded body according to claim 93, comprising one or more interior reinforcements.
